Question **1**

Correct

Write a program that prints a simple chessboard.

Input format:

The first line contains the number of inputs T.
The lines after that contain a different values for size of the chessboard

Output format:

Print a chessboard of dimensions size * size. Print a Print W for white spaces and B for black spaces.

Input:

2
3
5

Output:

WBW
BWB
WBW
WBWBW
BWBWB
WBWBW
BWBWB
WBWBW

Answer: (penalty regime: 0 %)

```
#include<stdio.h>
int main(){
    int t,size;
    scanf("%d",&t);
for(int i=0;i<t;i++){
scanf("%d",&size);
for(int j=0;j<size;j++){
     for(int k=0;k<size;k++){
        if((j+k)%2==0) printf("W");
else printf("B");

}
printf("\n");
}
}
    return 0;
}
```

	Input	Expected	Got	
✓	2 3 5	WBW BWB WBW WBWBW BWBWB WBWBW BWBWB WBWBW	WBW BWB WBW WBWBW BWBWB WBWBW BWBWB WBWBW	✓

Passed all tests! ✓

Question **2**
Correct

Let's print a chessboard!

Write a program that takes input:

The first line contains T, the number of test cases

Each test case contains an integer N and also the starting character of the chessboard

Output Format

Print the chessboard as per the given examples

Sample Input / Output

Input:

2
2 W
3 B

Output:

WB
BW
BWB
WBW
BWB

Answer: (penalty regime: 0 %)

```
#include<stdio.h>
int main(){
    int T;
    scanf("%d",&T);
    for(int t=0;t<T;t++ ){
        int N;
        char start;
        scanf("%d %c",&N,&start);
        // int c;
        // while((c=getchar()) !='\n' && c !=EOF);

         char color1,color2;
         if(start=='W'){
             color1='W';
             color2='B';
         }
         else{
```

```
            color1='B';
            color2='W';
        }
        for(int i=0;i<N;i++){
            for(int j=0;j<N;j++){
                if((i+j)%2==0) printf("%c",color1);
                else printf("%c",color2);
            }
            printf("\n");
        }
    }
    return 0;
}
```

	Input	Expected	Got	
✓	2 2 W 3 B	WB BW BWB WBW BWB	WB BW BWB WBW BWB	✓

Passed all tests! ✓

Question **3**
Correct

Problem Statement:

In a small coding competition, participants are to be grouped into teams of three members, each member represented by a number –
The rule of the competition states that no member can repeat within the same team.

Write a program to display all possible unique team combinations that can be formed using the members 1, 2, and 3 without repetitic

Sample Output:

1 2 3

1 3 2

2 1 3

2 3 1

3 1 2

3 2 1

Answer: (penalty regime: 0 %)

```c

#include<stdio.h>

int main(){
    int a,b,c;

    for(a=1;a<=3;a++){
        for(b=1;b<=3;b++){
            for( c=1;c<=3;c++){
                if(a!=b && b!=c && a!=c) printf("%d %d %d\n",a,b,c);
            }
        }
    }
    return 0;
}
```

	Expected	Got	
✓	1 2 3 1 3 2 2 1 3 2 3 1	1 2 3 1 3 2 2 1 3 2 3 1	✓

	Expected	Got	
	3 1 2 3 2 1	3 1 2 3 2 1	

Passed all tests!
